

02 – Linux Installation

VirtualBox Linux distribution

Jérôme Landré – jerome.landre@ju.se

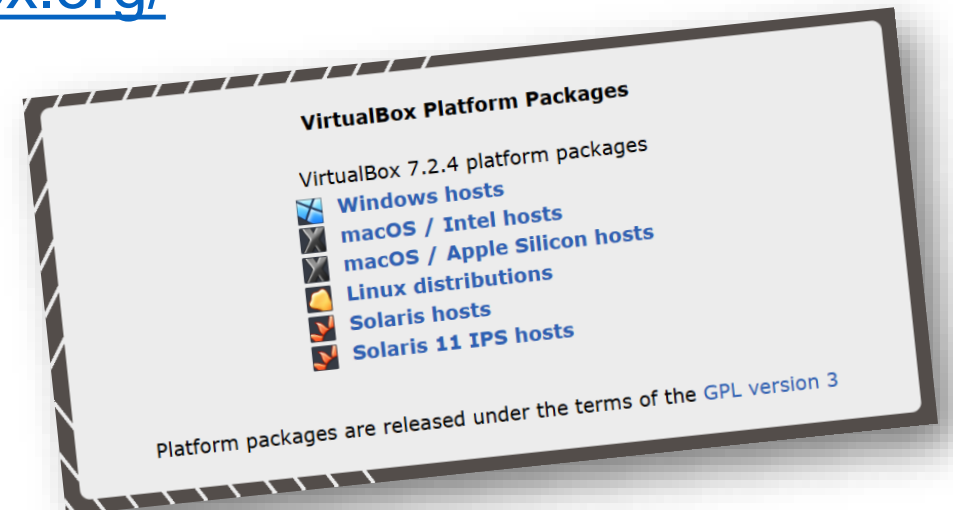

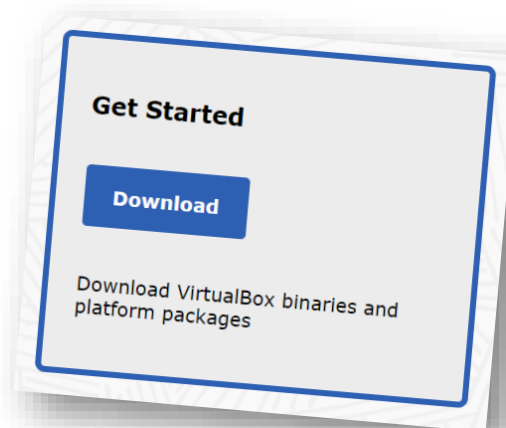

OUTLINE

- 1) VirtualBox
- 2) Linux Ubuntu
- 3) Linux on VirtualBox

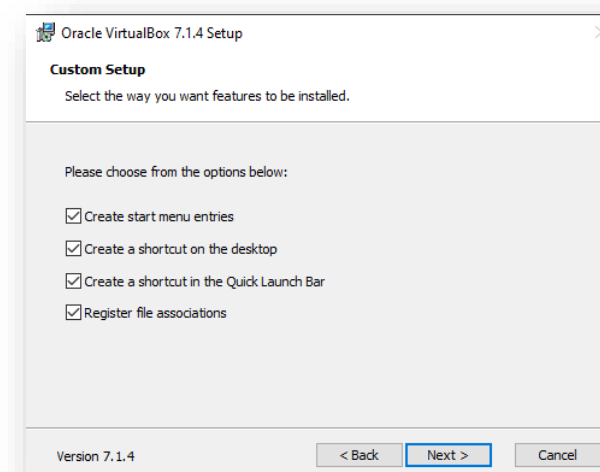

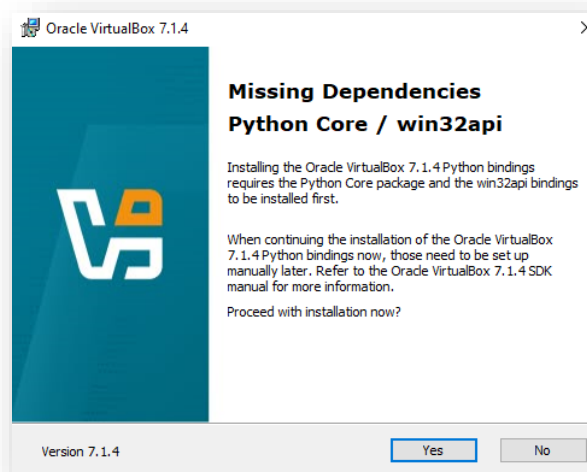

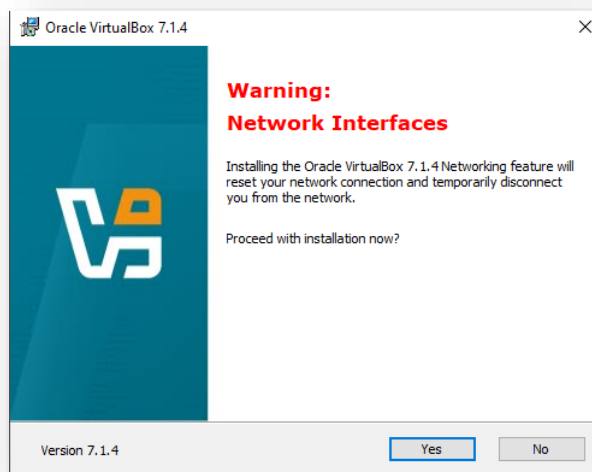

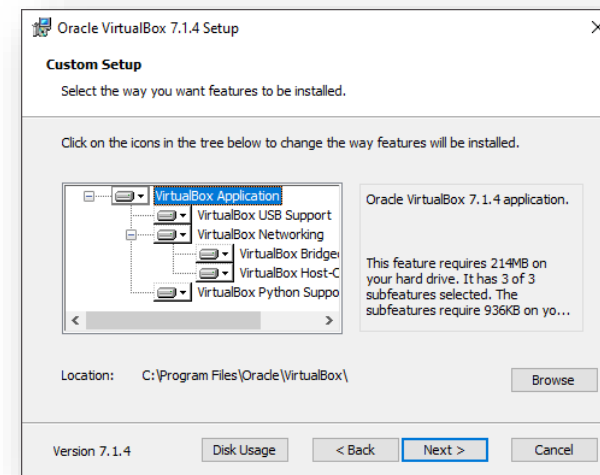

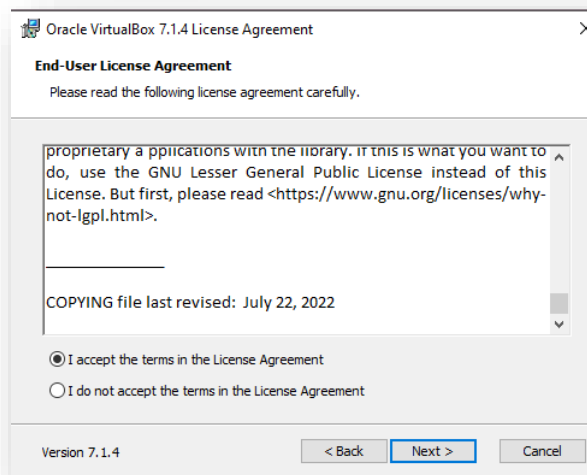

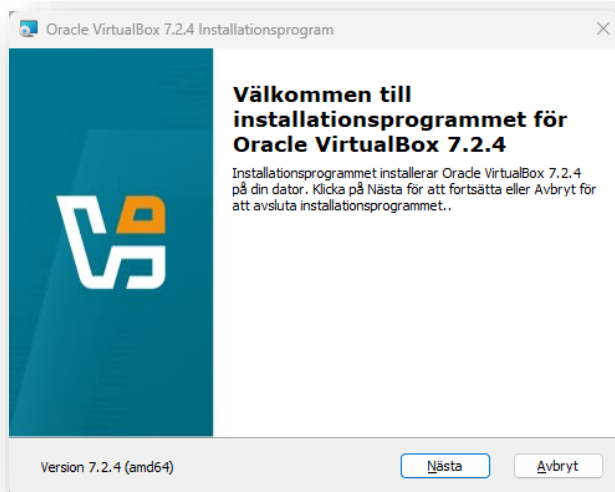

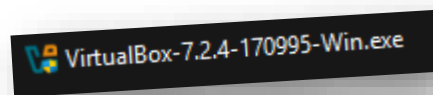

1) VIRTUALBOX

- **VirtualBox** is a powerful, open-source, and cross-platform virtualization software that allows users to create and run multiple virtual machines (VMs) on a single physical host computer. This enables the installation and operation of multiple operating systems (OSes) simultaneously, each with its own virtualized environment.

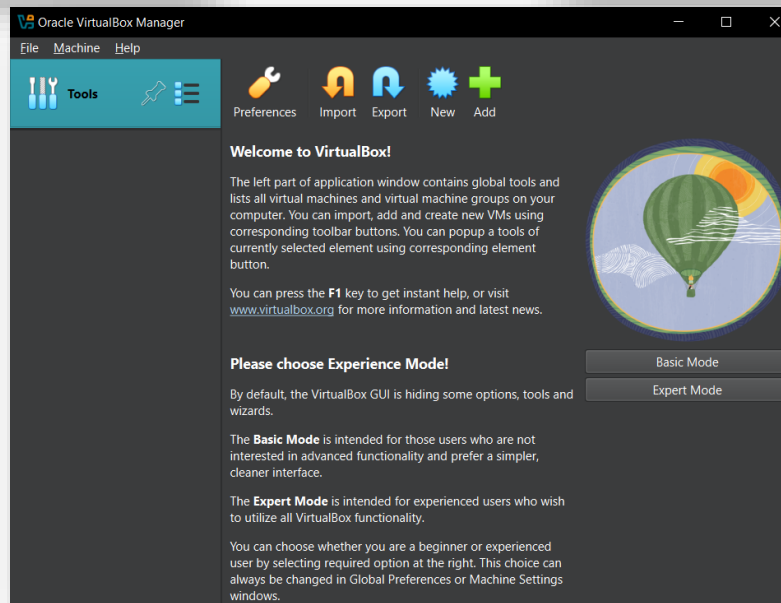

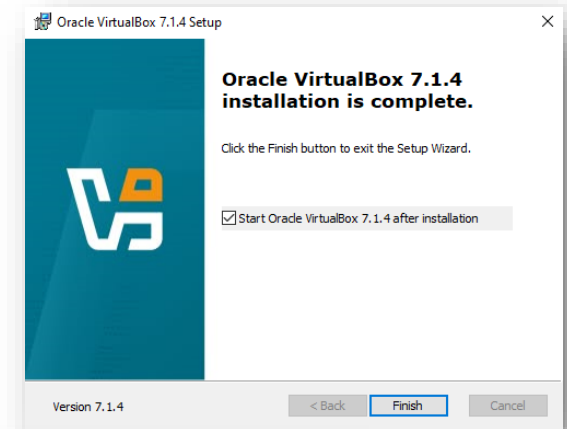

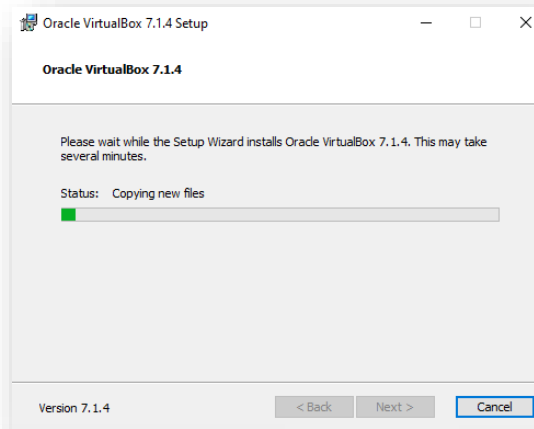

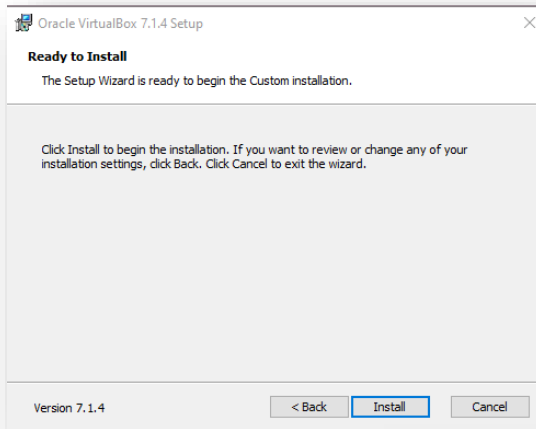

<https://www.virtualbox.org/>

1) VIRTUALBOX

2) LINUX LUBUNTU

- Ubuntu based distribution with lightweight graphical interface: Lubuntu (LXQT+Ubuntu)
<https://lubuntu.me/>

2) LINUX LUBUNTU

Ubuntu based

Built with a rock-solid Ubuntu Linux base, with thousands of free apps available and virus-free from the safe Software Center.

Compatible

Use all your music, PDFs, documents and files, and share them with other computers and operating systems.

Fast and lightweight

Designed to be fast, friendly, and energy saving, from Open Source software with a great supporting community behind.

Install it everywhere!

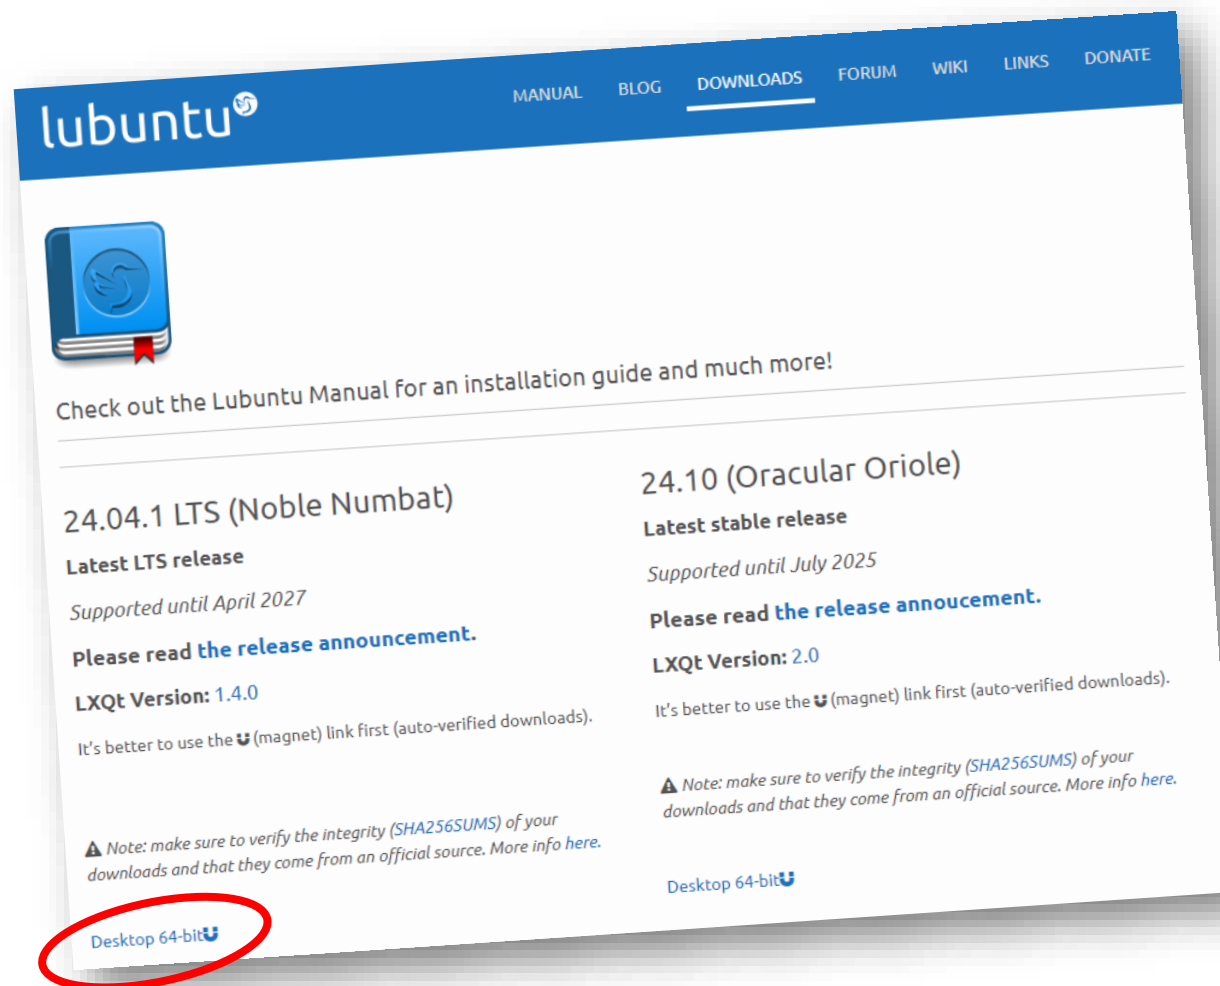

Lubuntu is offered in many ISOs for several computers, like standard PC, laptops, Raspberry Pi, etc.

Our Lubuntu QA Team ensures every release works well on every architecture. From maximum performance machines to those with older and more limited hardware, **Lubuntu** works flawless, giving you a smooth Linux experience.

Revive that old PC by installing **Lubuntu** and give it a second life!

2) LINUX LUBUNTU

ubuntu
lubuntu-24.04.1-desktop-amd64.iso

2) LINUX LUBUNTU

- If you have an ARM-processor, you need to download a special version for this **Linux Ubuntu Server for ARM** available there:

<https://ubuntu.com/download/server/arm>

- Install this Linux on VirtualBox, and then (from Tim Gorr, email to JL, 2024-10-24, tusen tack):

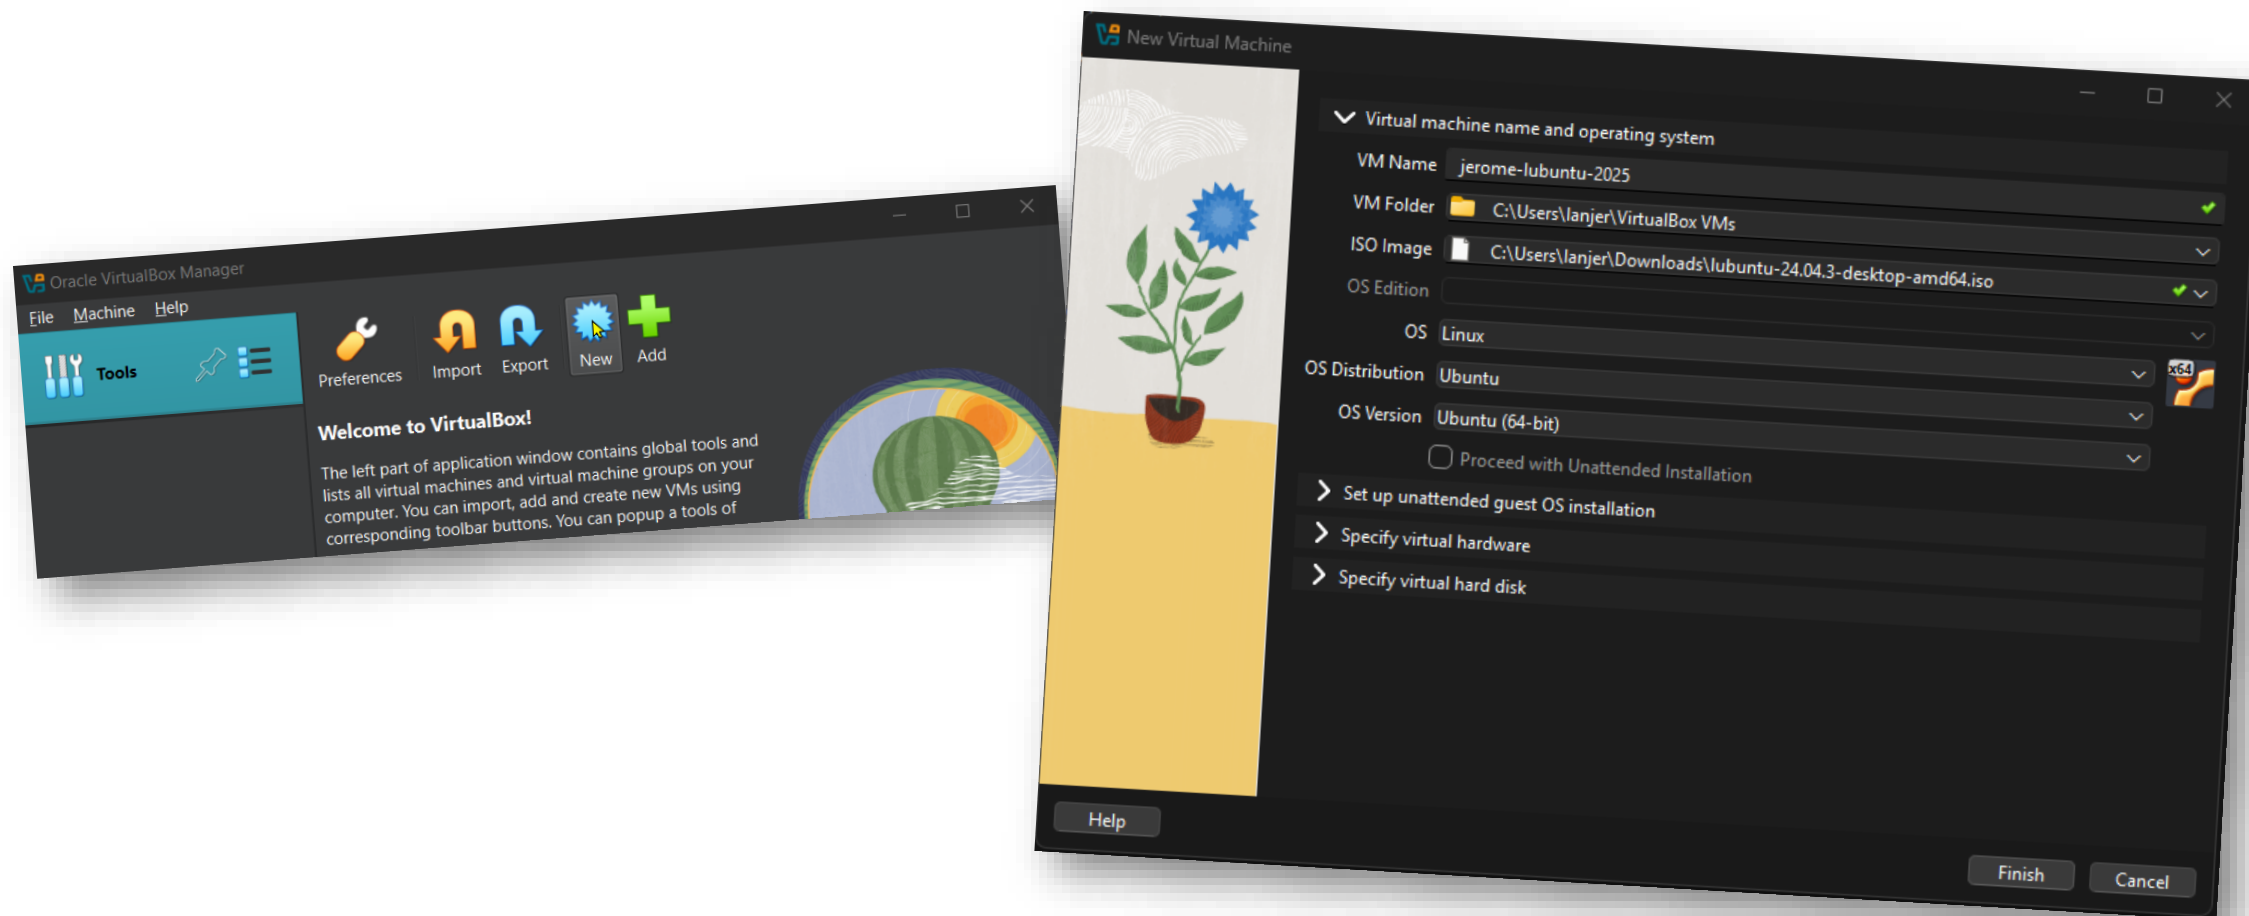

```
sudo apt update && sudo apt upgrade
```

```
sudo apt install lubuntu-desktop
```

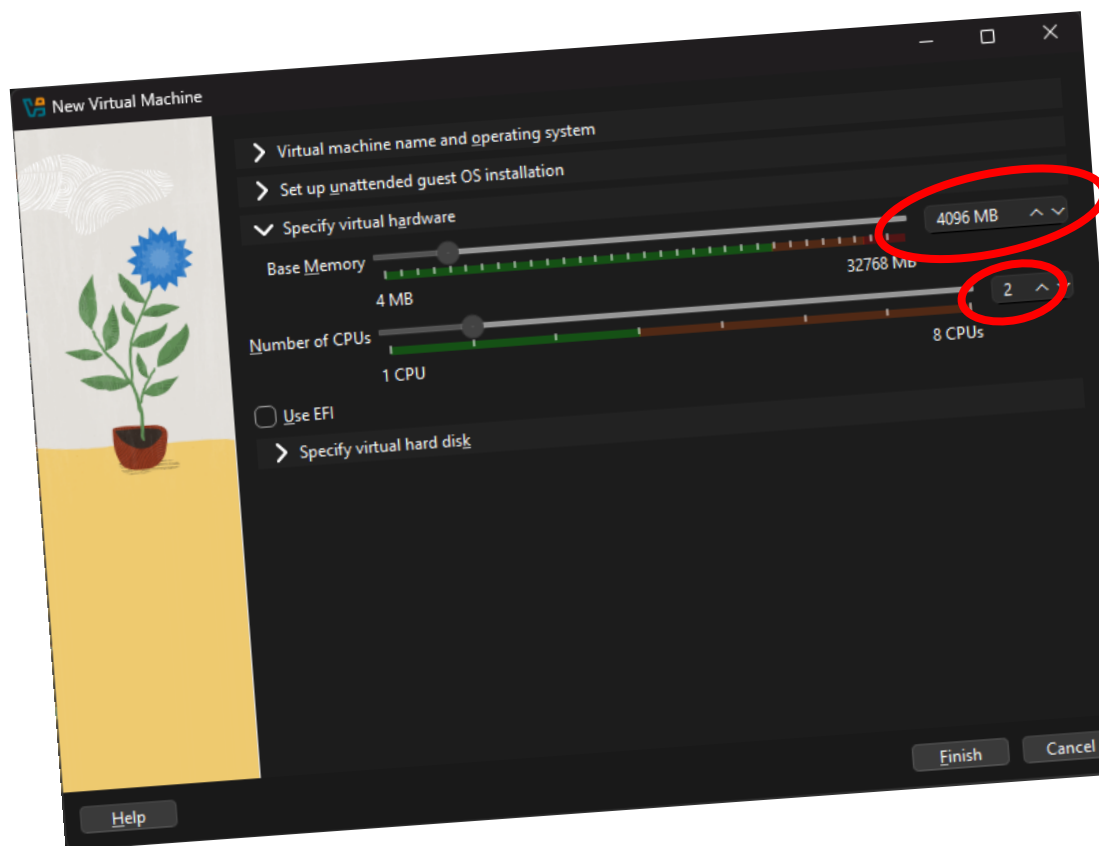

```
sudo reboot
```

!!!ARM processors!!!

3) LINUX ON VIRTUALBOX

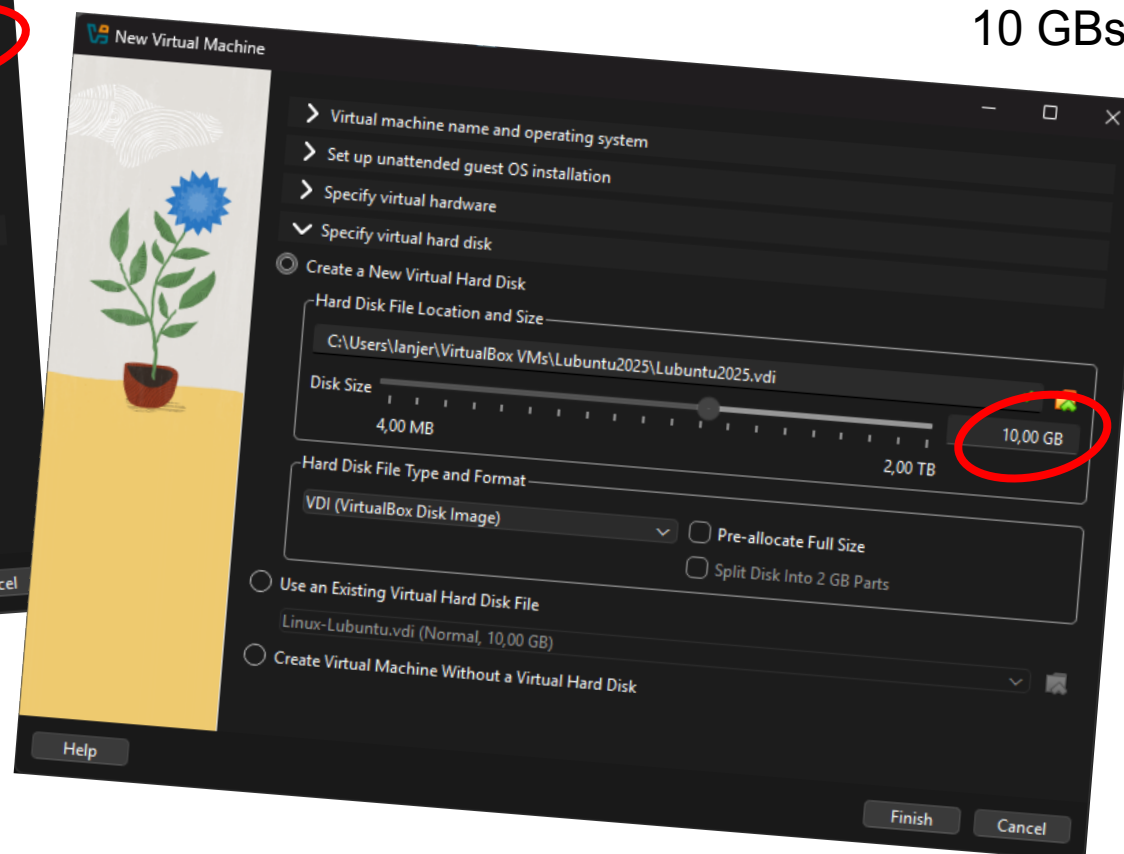

3) LINUX ON VIRTUALBOX

3) LINUX ON VIRTUALBOX

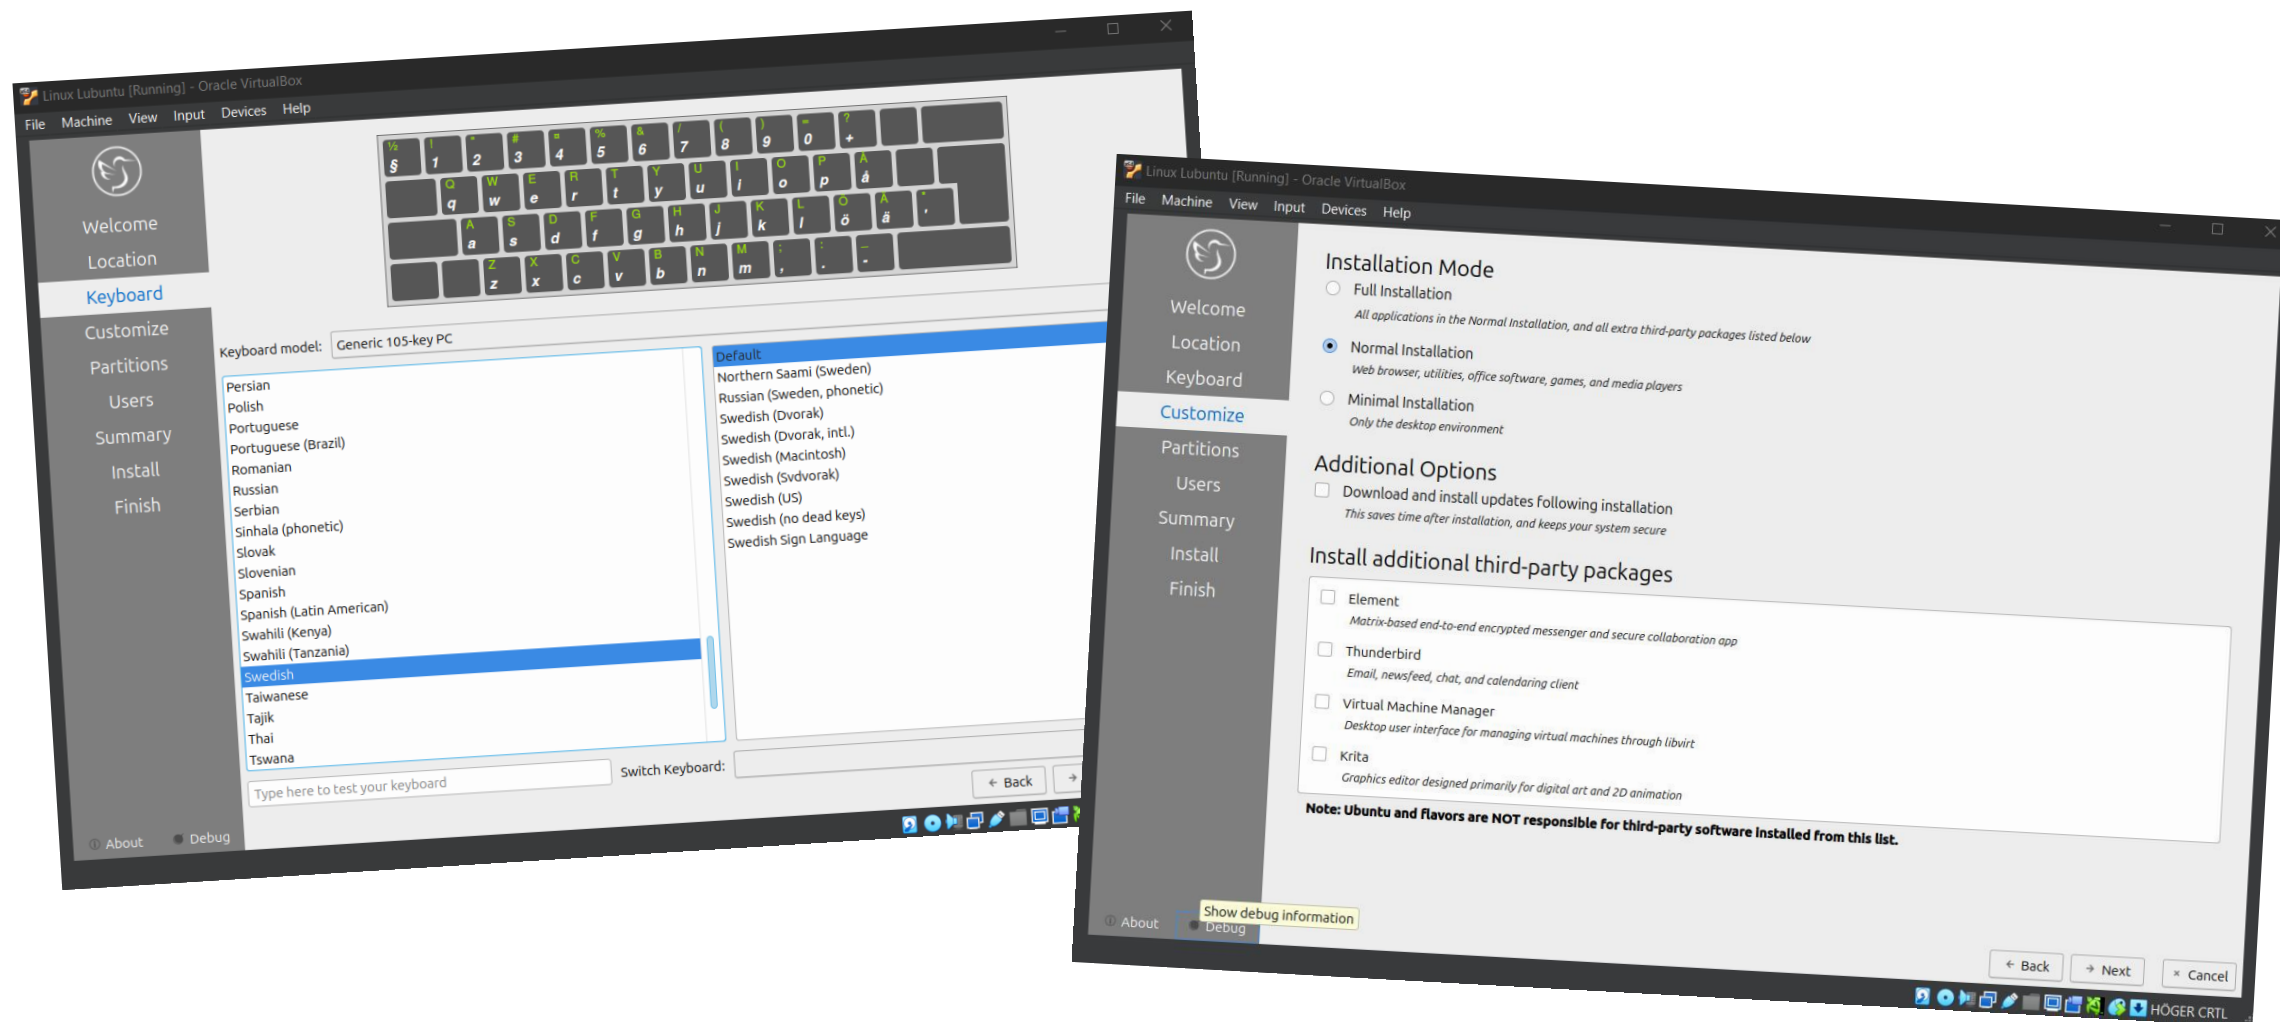

3) LINUX ON VIRTUALBOX

- **Update and upgrade** the system:

sudo apt update
sudo apt upgrade

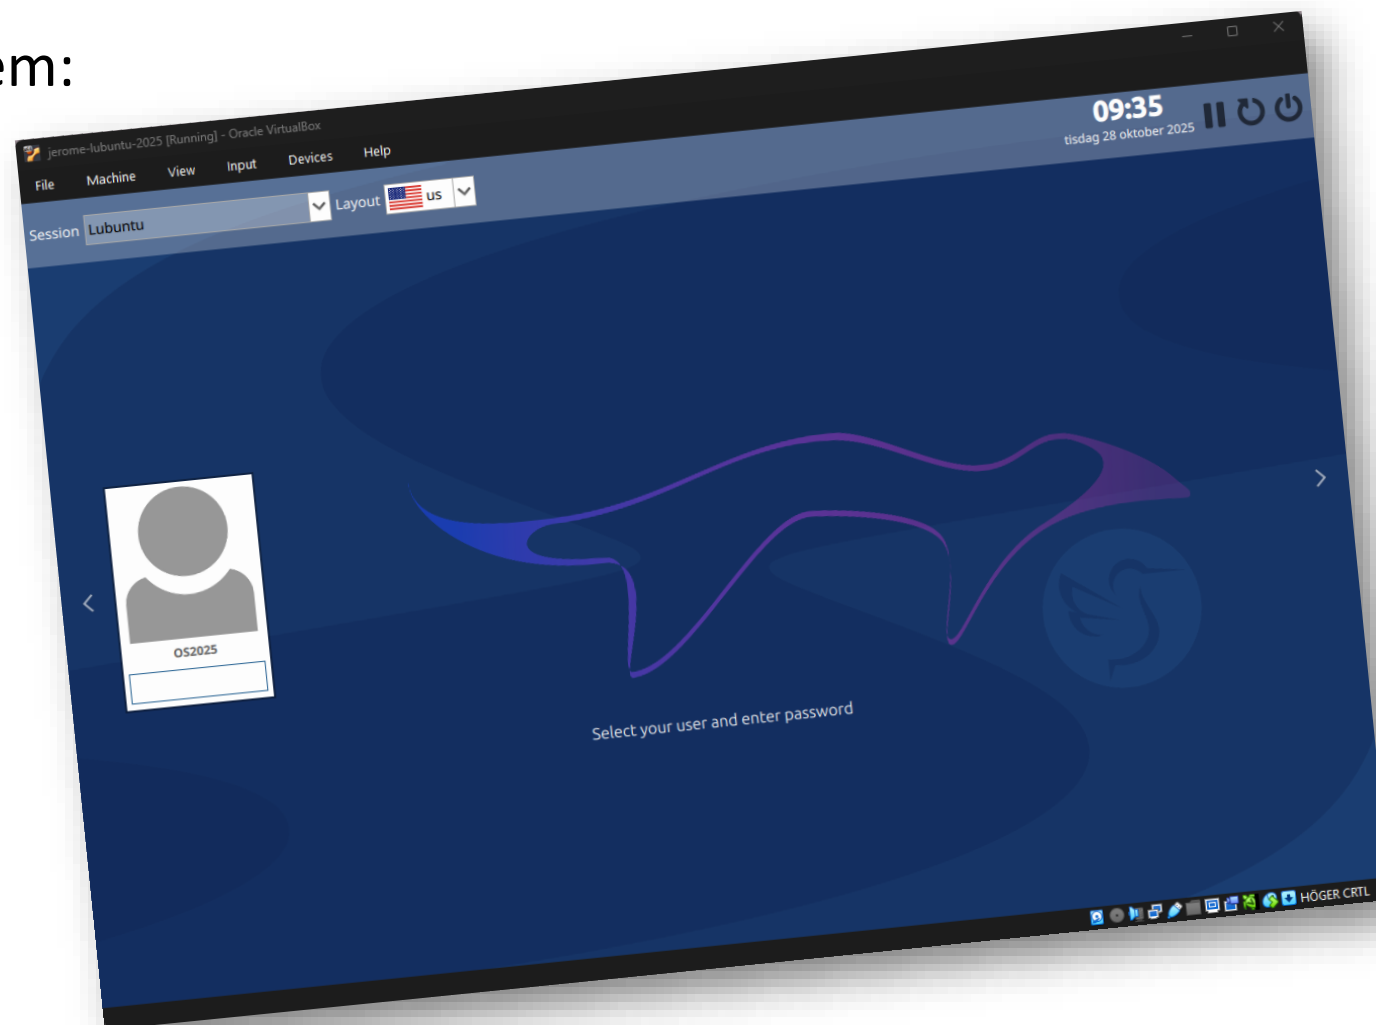

- **Reboot**

sudo reboot

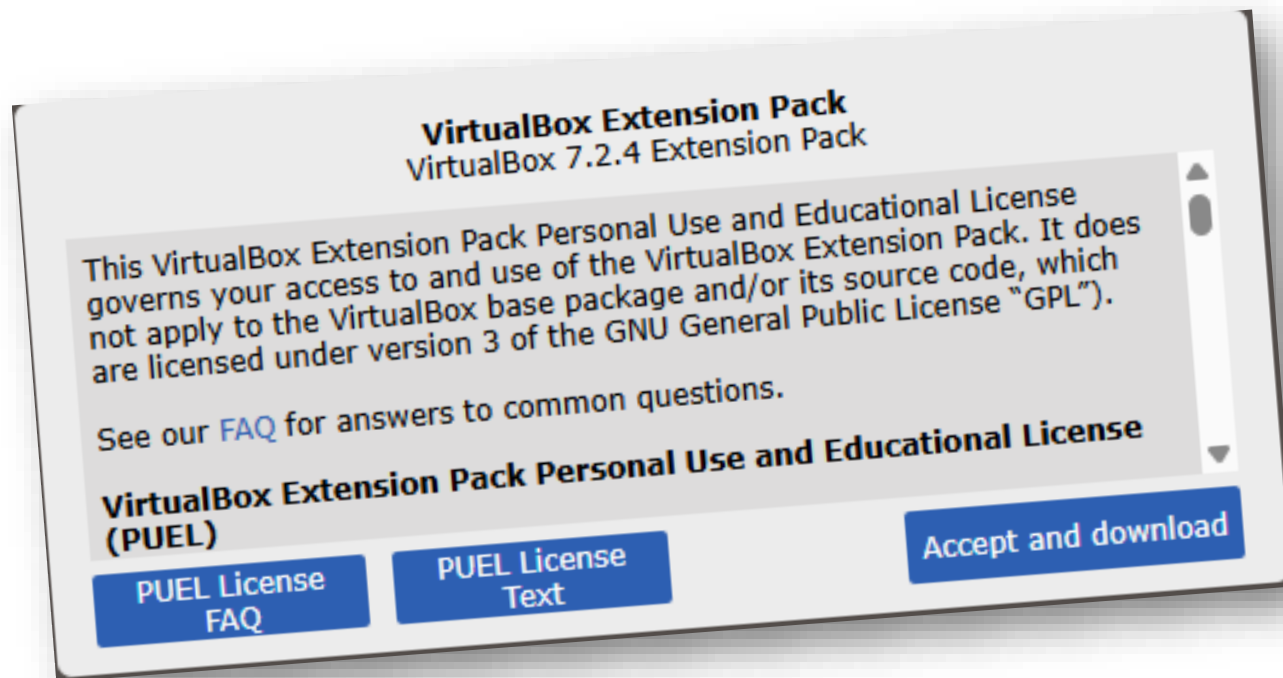

3) LINUX ON VIRTUALBOX

- **Update and upgrade** the system:
 sudo apt update
 sudo apt upgrade
- **Reboot**
 sudo reboot

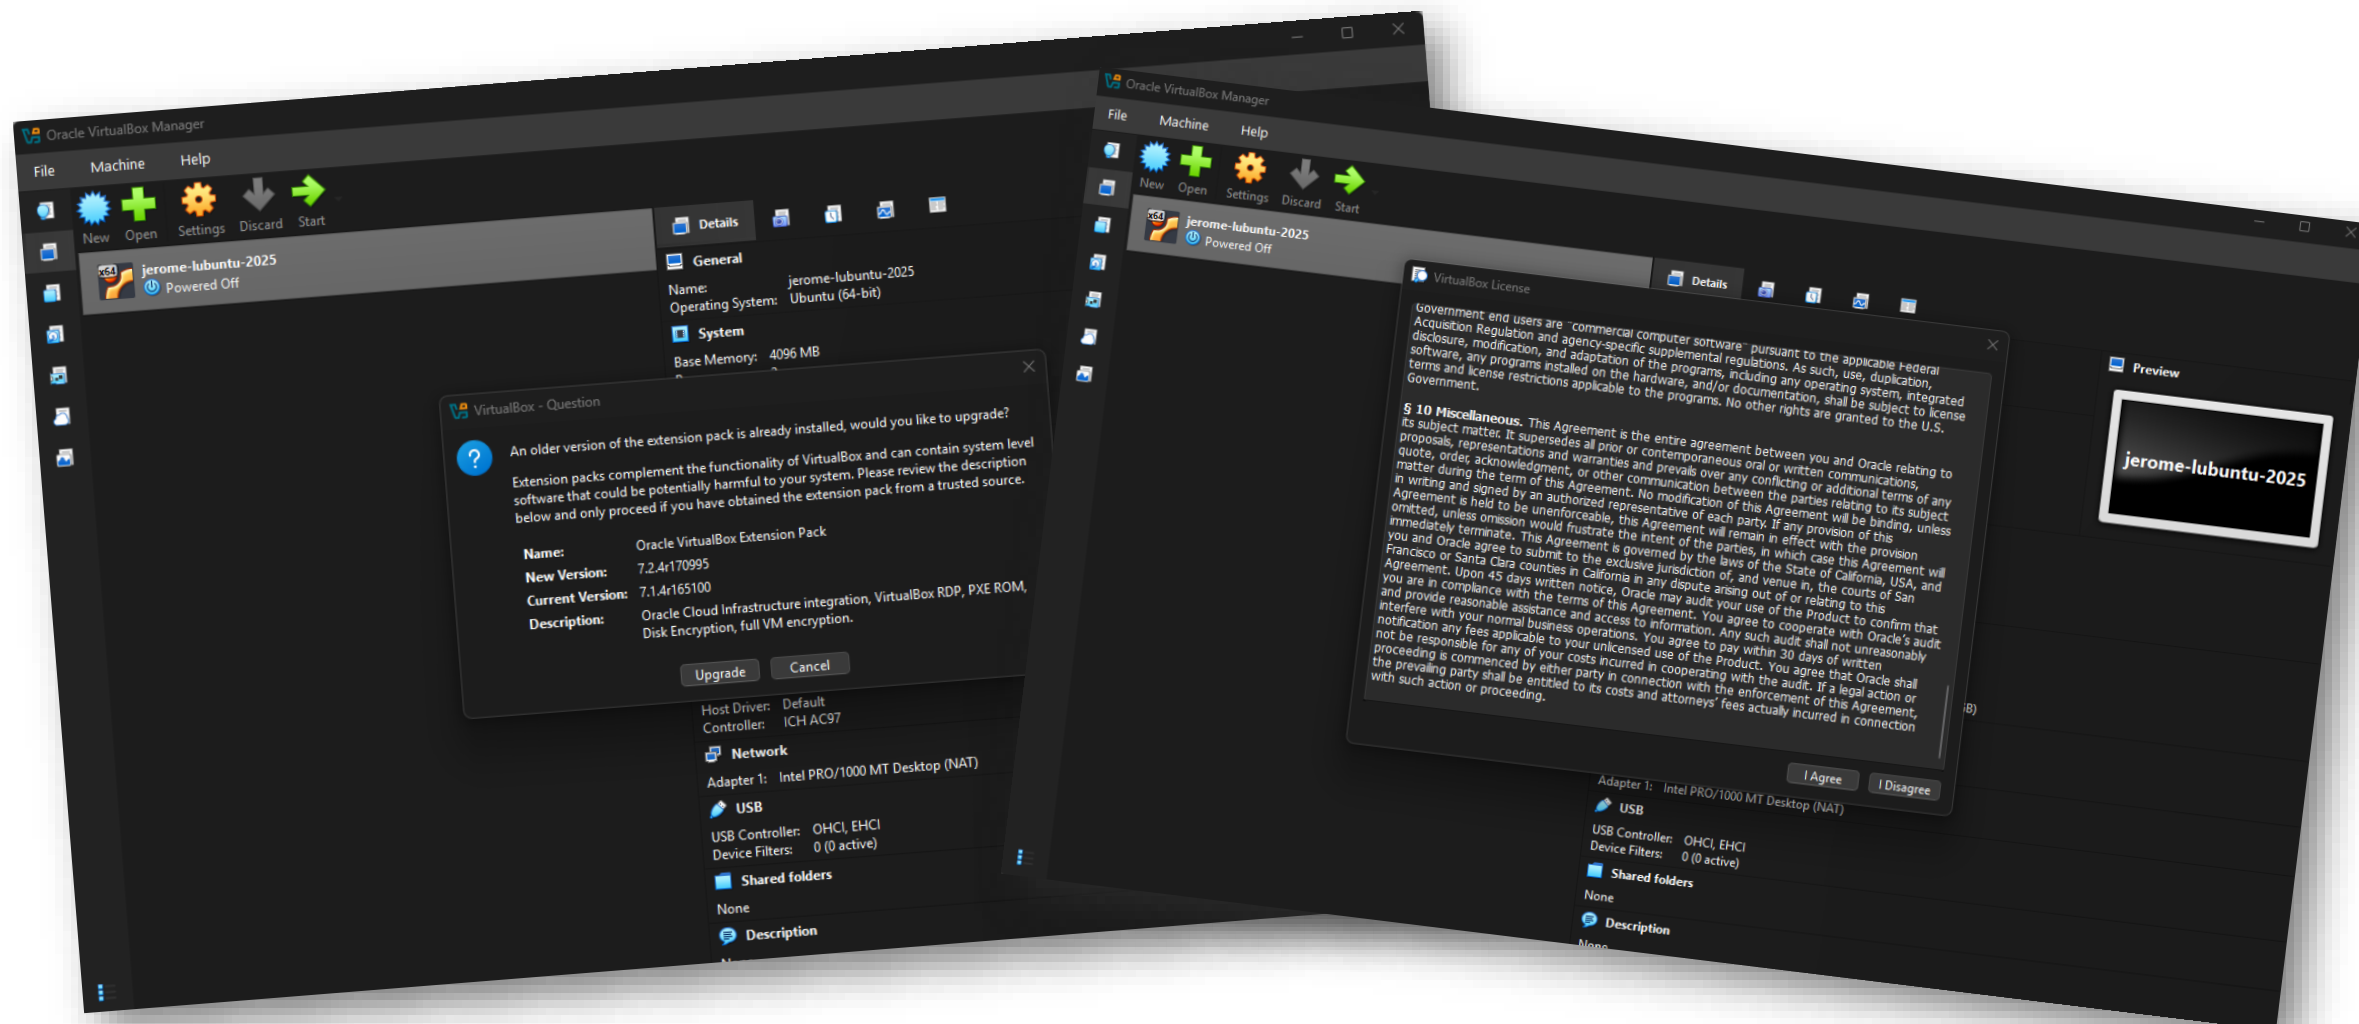

3) LINUX ON VIRTUALBOX

- VirtualBox Extension Pack: free for **Education** use

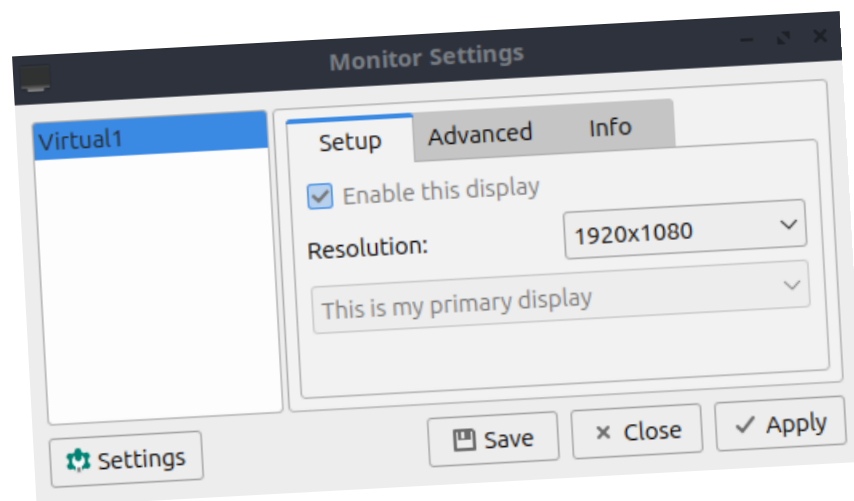

3) LINUX ON VIRTUALBOX

3) LINUX ON VIRTUALBOX

`sudo apt install virtualbox-guest-additions-iso virtualbox-guest-utils virtualbox-guest-x11 && sudo reboot`

- Change Preferences -> LXQT -> Monitor settings
