

Workshop: Git and Javascript

This workshop is dedicated to using git and Javascript to interact with web pages. You will work in a group of 4-5 students. You need at least one computer per group (of course, if you want to do the coding in parallel you can use more than one). The idea is to share your code within the group.

1) Creating a Github account - duration: 10 minutes

In this first part, you must create (if not exists) a Github account for you. You must choose a nickname (login), a password (8 to 12 characters with letters, numbers and special characters) and an email address. You can put the “ju.se” email address or any other address, you decide. Check your mailbox and validate the mail you have received to finish your account creation. I suggest that you go for 2 factor authentication (with your phone) to increase the security of the account.

2) Creating a shared repository - duration: 10 minutes:

After having created your account, one member of the group will create a new repository:

Please fill in several pieces of information about your project that will be named “wdf-group-pages” and will be Private:

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository.](#)
Required fields are marked with an asterisk (*).

1

General

Owner *

 jlandre72

Repository name *

wdf-group-pages

✓ wdf-group-pages is available.

Great repository names are short and memorable. How about [psychic-dollop](#)?

Description

The group pages for the work on Git and Javascript - Web Dev is Fun.

68 / 350 characters

2

Configuration

Choose visibility *

Choose who can see and commit to this repository

 Private

Add README

READMEs can be used as longer descriptions. [About READMEs](#)

Off ☐

Add .gitignore

.gitignore tells git which files not to track. [About ignoring files](#)

No .gitignore

Add license

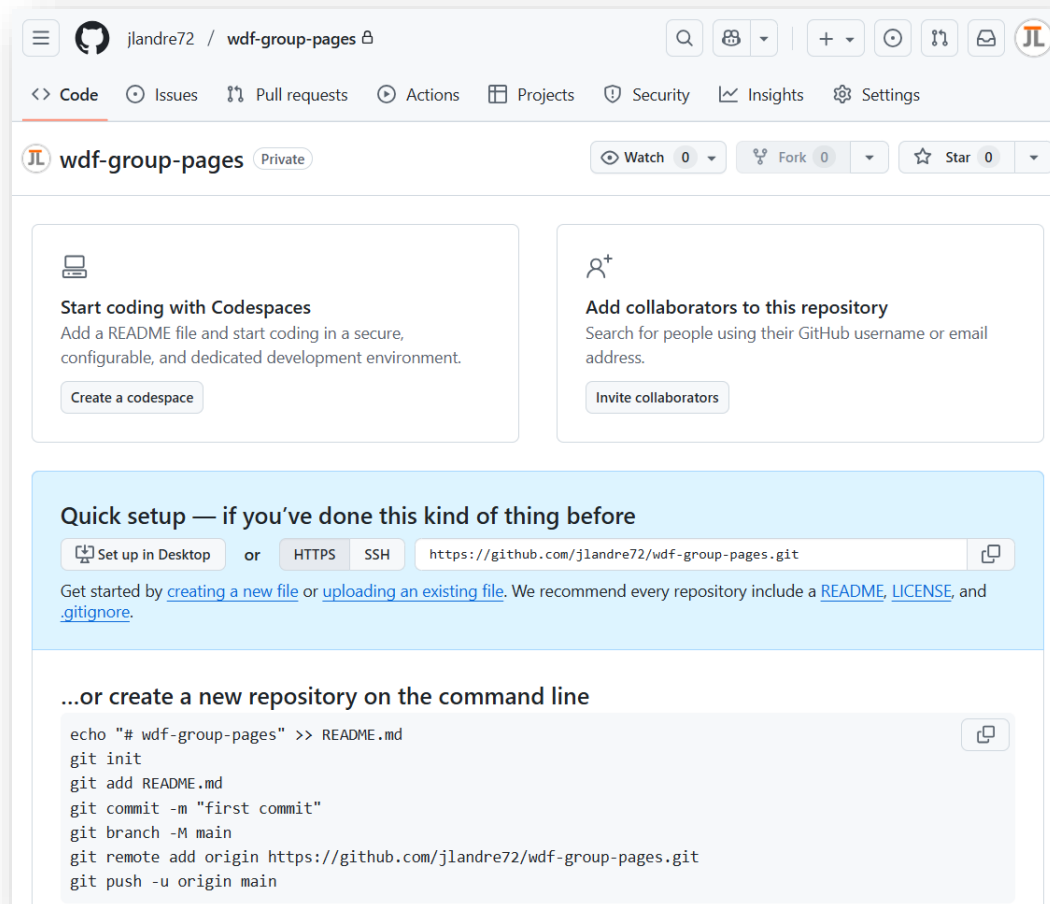

Licenses explain how others can use your code. [About licenses](#)

No license

Create repository

3) Creating a directory for your project on your local machine - duration: 10 minutes

Github suggests several steps to create a local copy of your repository on your local computer.

Let's do it the simple way! Open a terminal and type:

```
Microsoft Windows [Version 10.0.26100.4946]
(c) Microsoft Corporation. All rights reserved.

G:\>c:

C:\>cd Users\lanjer\Desktop

C:\Users\lanjer\Desktop>mkdir wdf-2025

C:\Users\lanjer\Desktop>cd wdf-2025

C:\Users\lanjer\Desktop\wdf-2025>git clone https://github.com/jlandre72/wdf-group-pages.git
Cloning into 'wdf-group-pages'...
warning: You appear to have cloned an empty repository.

C:\Users\lanjer\Desktop\wdf-2025>cd wdf-group-pages

C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>dir
Volume in drive C is Windows
Volume Serial Number is 2671-B1FB

Directory of C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages

2025-09-09  11:04    <DIR>          .
2025-09-09  11:04    <DIR>          ..
               0 File(s)                0 bytes
               2 Dir(s)  68 624 818 176 bytes free

C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>
```

Now, let's create a README.md file to describe our project:

```
C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>echo HEJ! > README.md

C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>git add .

C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>git commit -m "My first commit to push the file README.md on Github..."
[main (root-commit) c08e8cb] My first commit to push the file README.md on Github...
 1 file changed, 1 insertion(+)
 create mode 100644 README.md

C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>git push
Enumerating objects: 3, done.
Counting objects: 100% (3/3), done.
Writing objects: 100% (3/3), 250 bytes | 250.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To https://github.com/jlandre72/wdf-group-pages.git
 * [new branch]      main -> main

C:\Users\lanjer\Desktop\wdf-2025\wdf-group-pages>
```

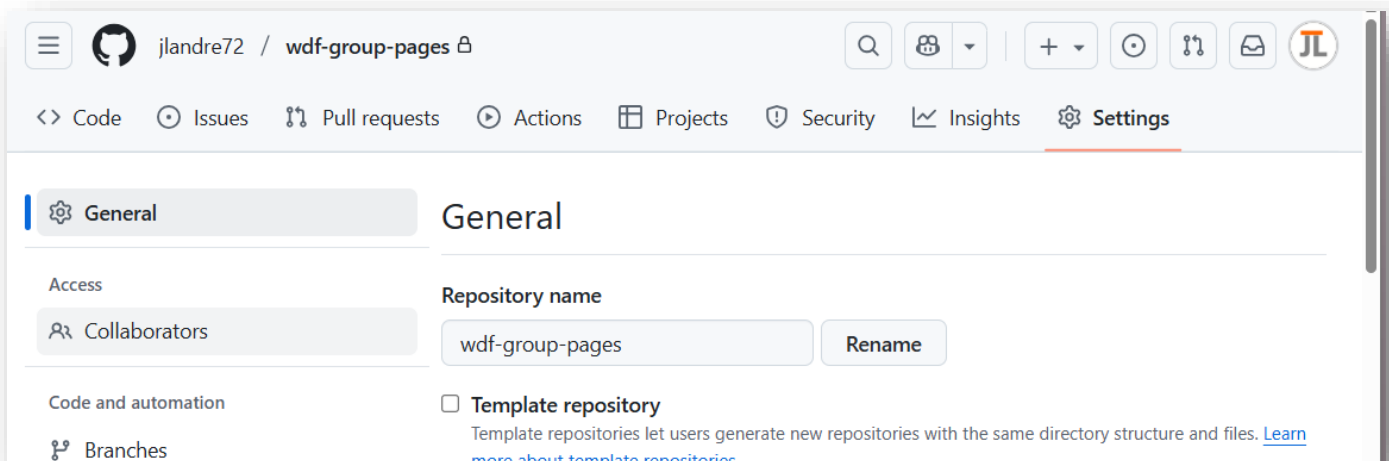

On Github, you should see your change in the project being pushed to your cloud repository:

The screenshot shows the GitHub web interface for a repository named 'wdf-group-pages' owned by 'jlandre72'. The repository is marked as 'Private'. At the top, there are navigation tabs for Code, Issues, Pull requests, Actions, Projects, Security, Insights, and Settings. Below the repository name, there are buttons for Watch (0), Fork (0), and Star (0). The main content area shows the 'main' branch selected, with a 'Go to file' button and a '+ Code' button. A commit history table lists a single commit by 'jlandre72' with the message 'My first commit to push the file README.md on...' and a timestamp of '1 minute ago'. Below the commit, a file named 'README.md' is listed with the same commit message and timestamp. A preview of the README file is shown, containing the text 'HEJ!'. On the right side, there is an 'About' section with the text 'The group pages for the work on Git and Javascript - Web Dev is Fun.' and a list of links for Readme, Activity, 0 stars, 0 watching, and 0 forks. At the bottom, there is a 'Releases' section.

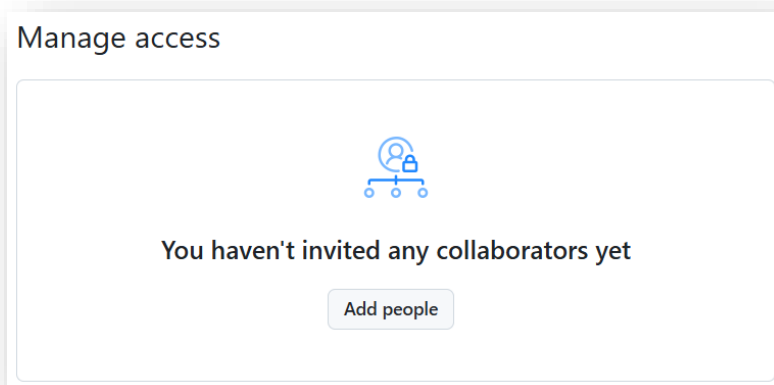

At this point, congratulations, one of you has created a repository on Github and has linked it to his local computer. Mycket bra! :)

4) Inviting colleagues to this repository - duration: 10 minutes

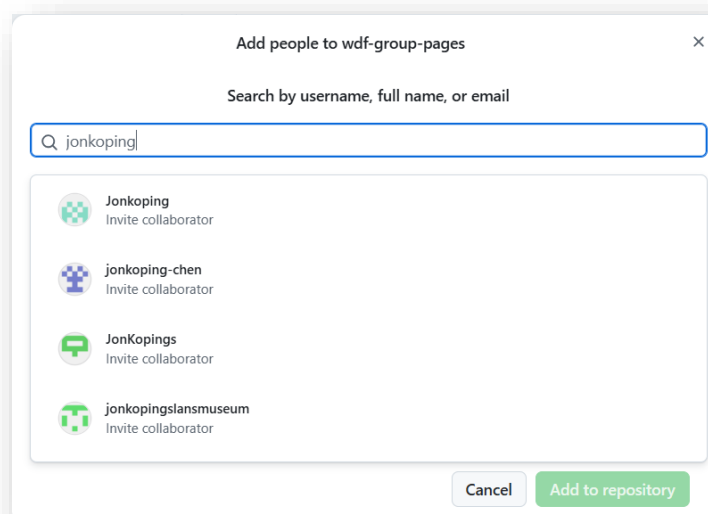

Now that one of you has a repository, he/she can invite the other members of the group to join:

Click on Collaborators:

Press “Add People” and search for all the members (the members must know their names, I put an example for jonkoping in my example but it is only an example...) of your group. Invite them to join:

All the members will receive an invitation to join (via email) and must accept by clicking on the attached link in the mail. Congratulations, you have set up a group!

5) Creating the local clone of the repository - duration: 10 minutes

Now, every member of the team must create a local directory and clone the “main” repository on their local computer:

```
C:\>cd Users\lanjer\Desktop\

C:\Users\lanjer\Desktop>mkdir wdf-projects-2025

C:\Users\lanjer\Desktop>cd wdf-projects-2025

C:\Users\lanjer\Desktop\wdf-projects-2025>git clone https://github.com/jlandre72/wdf-group-pages.git
Cloning into 'wdf-group-pages'...
remote: Enumerating objects: 3, done.
remote: Counting objects: 100% (3/3), done.
remote: Total 3 (delta 0), reused 3 (delta 0), pack-reused 0 (from 0)
Receiving objects: 100% (3/3), done.

C:\Users\lanjer\Desktop\wdf-projects-2025>dir
Volume in drive C is Windows
Volume Serial Number is 2671-B1FB

Directory of C:\Users\lanjer\Desktop\wdf-projects-2025

2025-09-09 11:09 <DIR>      .
2025-09-09 11:09 <DIR>      ..
2025-09-09 11:09 <DIR>      wdf-group-pages
                0 File(s)            0 bytes
                3 Dir(s)  68 613 083 136 bytes free

C:\Users\lanjer\Desktop\wdf-projects-2025>cd wdf-group-pages

C:\Users\lanjer\Desktop\wdf-projects-2025\wdf-group-pages>dir
Volume in drive C is Windows
Volume Serial Number is 2671-B1FB

Directory of C:\Users\lanjer\Desktop\wdf-projects-2025\wdf-group-pages

2025-09-09 11:09 <DIR>      .
2025-09-09 11:09 <DIR>      ..
2025-09-09 11:09          7 README.md
                1 File(s)            7 bytes
                2 Dir(s)  68 613 083 136 bytes free

C:\Users\lanjer\Desktop\wdf-projects-2025\wdf-group-pages>
```

Congratulations, at this point, every member of the team can have access to the shared repository on Github.

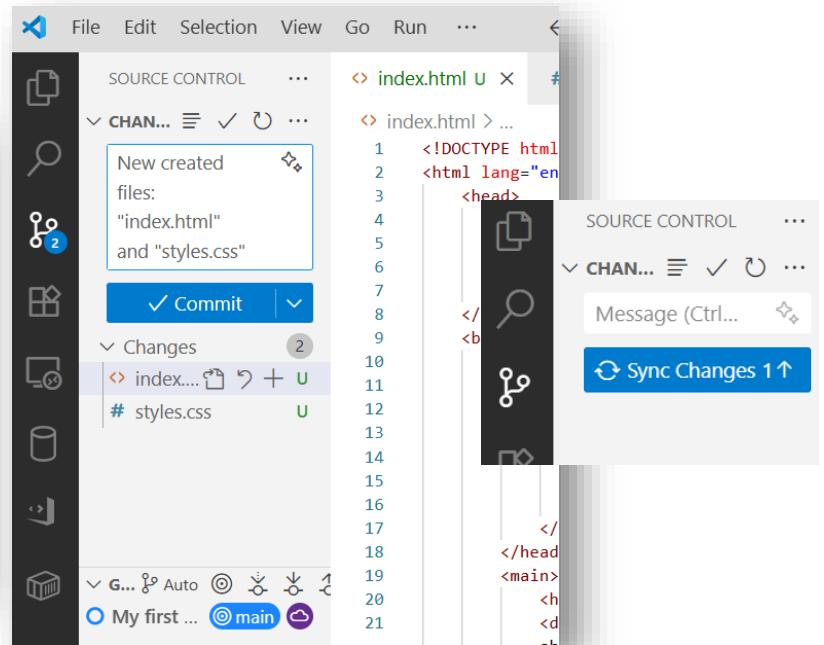

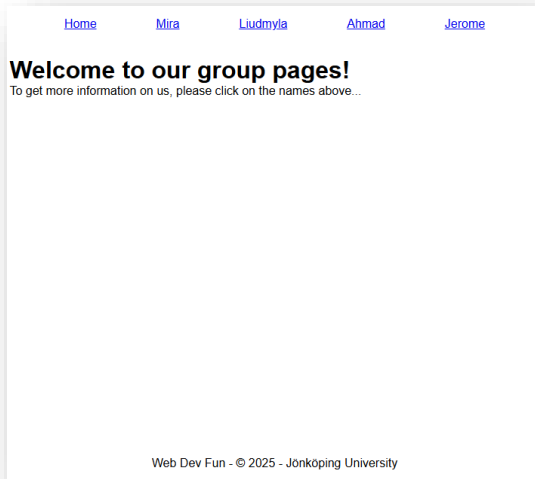

6) Creating a website - duration: 10 minutes

The owner of the directory must create an HTML and a CSS file:

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Our group pages</title>
7      <link rel="stylesheet" href="styles.css">
8  </head>
9  <body>
10 <header>
11 <nav>
12 <span><a href="index.html">Home</a></span>
13 <span><a href="mira.html">Mira</a></span>
14 <span><a href="liudmyla.html">Liudmyla</a></span>
15 <span><a href="ahmad.html">Ahmad</a></span>
16 <span><a href="jerome.html">Jerome</a></span>
17 </nav>
18 </header>
19 <main>
20 <h1>Welcome to our group pages!</h1>
21 <div>To get more information on us, please click on the names
22 above...</div>
23 </main>
24 <footer>
25 <span>Web Dev Fun - &copy; 2025 - Jönköping University</span>
26 </footer>
27 </body>
28 </html>
```

```
# styles.css > ...
1  * { font-family: sans-serif;
2    padding: 0; margin: 0; }
3  body {
4      display: flex;
5      flex-direction: column;
6      min-height: 100vh;
7  }
8  header {
9      width: 100%;
10     height: 10vh;
11 }
12 nav {
13     display: flex;
14     flex-direction: row;
15     justify-content: space-evenly;
16     align-items: center;
17 }
18 main {
19     padding: 10px;
20 }
21 footer {
22     margin-top: auto;
23     width: 100%;
24     height: 10vh;
25     display: flex;
26     flex-direction: row;
27     justify-content: space-evenly;
28     align-items: center;
29 }
```

You should obtain a common page:

You can use Visual Studio Code (or the terminal) to push these two pages. The other members will pull them (they can use the terminal or Visual Studio Code). You will all get the same version.

7) Creating individual pages - duration: 10 minutes

All the members can now create their own page (jerome.html for instance) with their first name. You can also create your own style file, be careful of the names, they should be unique and different for each member of the group. I suggest jerome.css when jerome is doing his own CSS file.

This page MUST contain:

- A picture of the person
- The firstname and lastname of the person
- A short paragraph presenting the person to the group: I am Jerome, I come from France, I love development and learning new things...
- A button that will change something on the screen when clicked: a color, a background-color...
- Using AI, please ask for the code to obtain an animation of the picture:
 - o using the "position:absolute;" and the "left" and/or "top" style values to define the position of the picture on the screen
 - o using the setInterval function in JS to set a time interval for the animation
 - o The picture should stay on the screen (bounce on the borders when it touches them).
- There must be a link to the index.html page (the homepage of the group) at the top of the screen (you do not need a full menu there, just being able to come back to the main page of the group).

You must add changes, commit them and push them. At the end of the session, everyone should get all the pages of all the other members.

Congratulations, you did it!

TACK OCH GRATTIS FÖR IDAG!
